EXPERIENCE WIRELESS FREEDOM

UHF-A6 Commercial UHF True Diversity Wireless Microphone System

 INFRARED (IR) SYNCING FEATURE

- UHF True Diversity - 2 radio modules per antenna are continuously compared to select the strongest signal delivering an exceptionally stable radio signal.
- Ability to use up to 100 individual channels simultaneously (multiple receivers required)
- Built-in SQ - Allows you to adjust the receivers range. If more than one radio system is used in a single area, adjust your SQ to only go as far as your microphones to avoid picking up unwanted frequencies.
- High Durability - Dent resistant to avoid damage from big drops.
- Channel Assigned Frequencies - It's easier to remember a single number than a frequency number so we created a way to assign an "easier to remember" sequence to each frequency such as 1, 2, 3, etc... versus xxx.xx. This makes assigning different microphones to different rooms a snap.
