Go to Apple Device's setting, WiFi, connect to network begins with KODAP,

Password 87654321

Go to Songbook App, setup, find KOD3000, manual search, enter <http://192.168.12.1> then confirm

Sync KOD3000 song database and wait for the list to load, then you can start to play

Adding song using USB flash drive

Make sure you have a flash drive and it is in FAT32 format

Create a folder named "mp3gsong_add" for mp3 and cdg files or "mtvsong_add" for mp4, mkv, or mpg files on your usb flash drive.

Make sure the file you are trying to add is in the form of "artist-title" and not "artist – title".

Plug the flash drive to the front usb port of KOD-BD2000

Go to song manager>song import>usb

Now the songs will be added to the hard drive. After you added the song you can go to song manager>song editor>ripped songs to see the songs you added and to change the information or delete them

If the mp4, mkv, or mpg song you added is only giving vocal/stereo you can change the track information to track 2 to give you instrumental track, assuming that the file have 2 audio tracks
